

We appointed Dr Abhishek Asthana, Director - Industrial Energy Pioneers (IEP) Ltd., to advise us on making an application to the Industrial Energy Transformation Fund (IETF) for a grant towards a feasibility study to consider energy efficiency measures we could adopt. Thanks to IEP's expertise in preparing the documentation, our application was successful, and the grant was awarded in the competition. IEP are now engaged in conducting the feasibility study, and the grant has minimised the costs and risks of the project for us.

IEP's engineering team are very knowledgeable and resourceful. They have designed the optimum energy efficiency solution for our site, striking the perfect balance between technological limits and financial returns which offers the best value for money. We expect that the implementation of their recommendations will help us gain competitive advantage by reducing our fuel costs as well as cutting carbon emissions for the foreseeable future.

IEP have helped us plan the project financially and have supported us throughout the grant claim process to ensure that the claims are prepared on time and the payments received without hassles. This has been extremely valuable for a small company like ours with limited manpower and spare resources.

We strongly recommend Dr Abhishek Asthana and his team at Industrial Energy Pioneers.
